

Introduction

Inside Body is a PowerPoint template that pupils use to produce their own ICT presentations on the effects of a substance on the body. There are three templates for alcohol, tobacco and solvents. A PowerPoint presentation consists of a series of slides that can include images and/or text. More advanced presentations may also include sounds and movie clips. Pupils select information from a resource document and insert this text into their presentation. They select relevant pathological images, which are provided on the PowerPoint templates and use these to illustrate their presentation. They can also insert information that they have researched from other sources. This activity should be accessible to a wide range of abilities.

Requirements (per group)

- Background resource booklet
- Access to Internet if requested
- Computer with PowerPoint software and *Inside Body* PowerPoint templates saved locally

A digital projector linked to a computer and a suitable screen are required to display the presentations.
